Application with custom functions for ZWCAD Standard

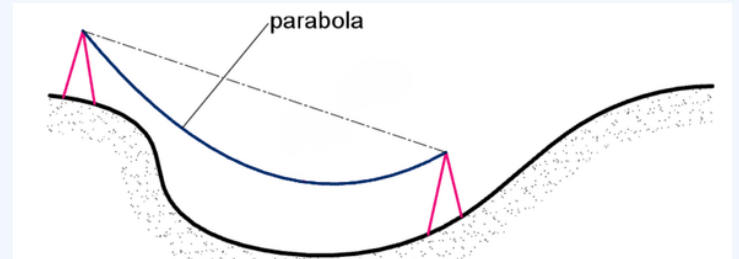

Block management

- Direct edition of nested block.
- Drawing arrows.
- Scaling blocks with a base point.
- Creating custom array.
- Labeling the vertices and midpoints of a polyline with a custom block.

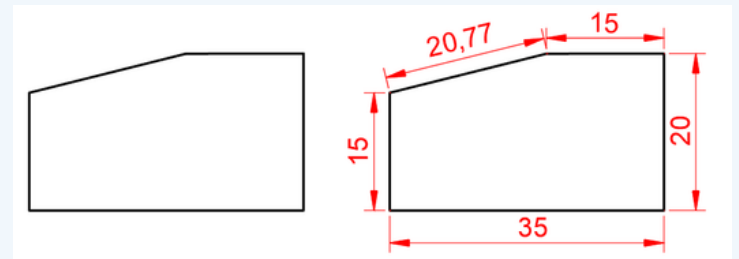

Line management

- Drawing one or more parabolas between two specified points.
- Outlining a polyline.
- Mass chamfering/filleting of object.
- Converting a multiline to a polyline.
- Changing style of a multiline.

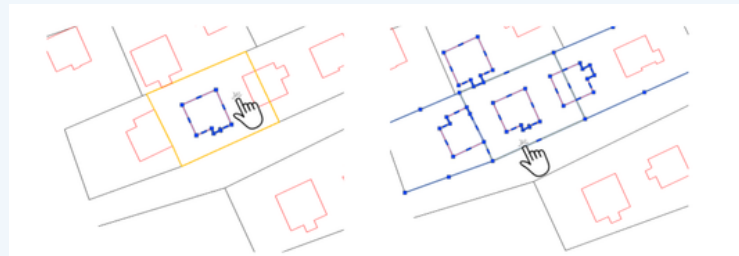

Dimension management

- Calculating the distance between specified points.
- A new dimensioning style based on an existing dimension.
- Automatic dimensioning of a closed polyline.

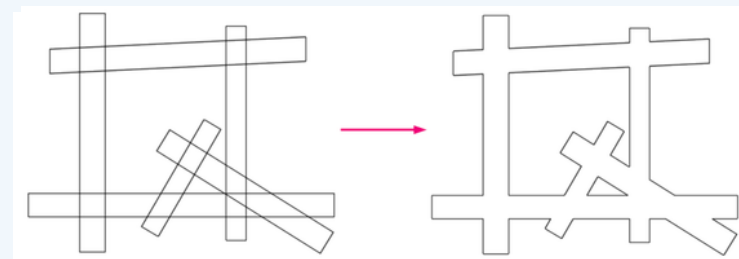

Selection

- Selecting objects inside a closed polyline by pointing a line or a point.
- Selecting objects inside a closed polyline and those tangent to it by pointing to a line or a point.

Other tools

- Removing the intersection of polylines.
- A new object with the properties of another.
- Rotating the coordinate system by a specified angle.
- Changing the background colour (black, grey, white).
