ZWExtender

Additional tools for everyday work in ZWCAD

- Make use of tools to assist with measurements
- Nest objects efficiently and without a waste
- Use Health&Safety symbols and special block library
- Work with blocks, groups and create tables

- ✓ **Useful functions**
- ✓ **Intuitive interface**
- ✓ **Perpetual licence**

Application made for:

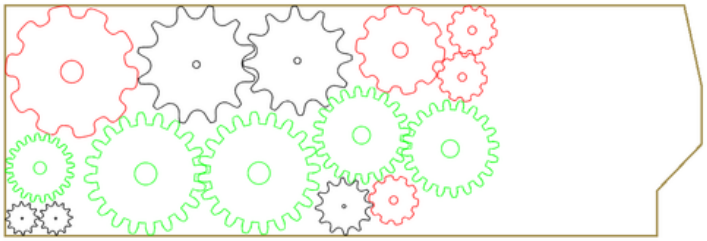

- Architects and surveyors
- Design offices
- ZWCAD PRO users
- Designers and constructors

Complete solution based on our users' requests

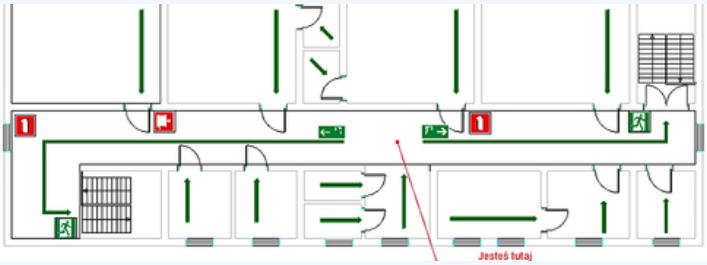

Nesting

Automaticly placeme components within the area enclosed by a polyline to make the most of the available space. This is particularly useful when cutting components from metal, wood and other materials, as it minimises waste and saves plenty of time.

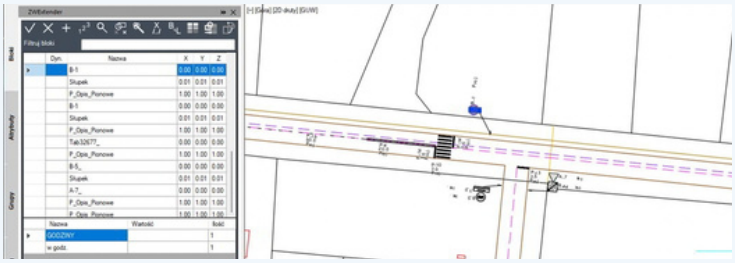

Health&Safety symbols

- Health&Safety symbols and sign library
- Marking out lanes and crossings, areas closed to traffic, etc.
- Inserting lines/areas to mark out, for example, storage areas, places or fire safety zones.

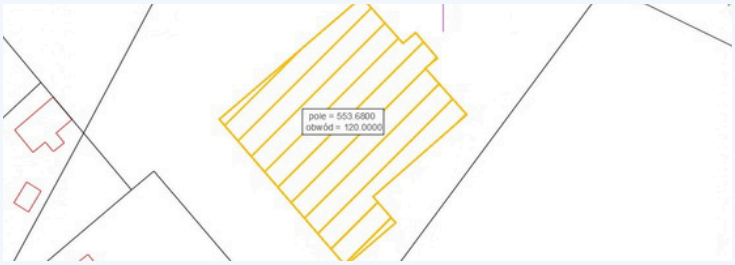

Groups and blocks panel

- Counting blocks, adding objects to blocks, searching for them, removing unused and special exploding blocks.
- Group management, adding, removing and changind display of blocks.
- One handy panel to manage it all.

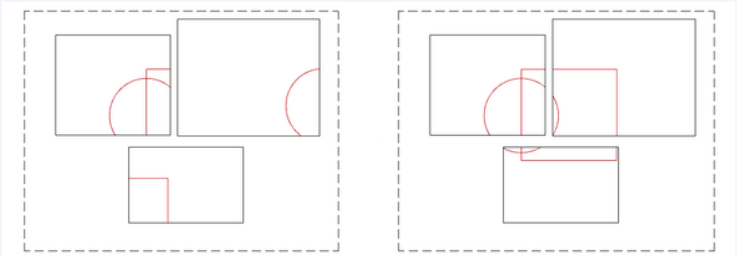

Measurement

- Outlining and describing surfaces.
- Labeling objects.
- Summing lengths.
- Checking that dimensions are correct.
- Searching inside a drawing.
- Creating summaries of areas and lengths.

Other tools

- Creating custom arrays.
- Exporting/importing coordination systems from .csv., .txt or .dwg files.
- Synchronising viewports.
- Creating lists of coordinates for points, circles and blocks.
